

Implementation of P.L. 106-554

P.L. 106-554 establishes a five year appropriation schedule for project funding. A seven year construction schedule has been developed for the various structural components of ALP, as illustrated below.

Between now and October 1 there are a number of procedural and cost repayment issues to be worked out among the project participants. Also there are several tasks that must be completed before work can begin to construct

Ridges Basin Dam, including relocating pipelines and electric transmission lines.

As pre-construction and construction activities develop, the Bureau will periodically issue newsletters and press releases to keep the public informed. Also, the ALP website will be updated periodically to reflect progress in implementing the Colorado Ute Indian Water Rights Settlement Act.

Proposed Animas La Plata Implementation Schedule
